## Question 1

Correct

Mark 1.00 out of 1.00

**Problem Statement:**

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

**Input Format**

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

**Output Format**

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

**Answer:** (penalty regime: 0 %)

```

1  #include <stdio.h>
2
3  int findPair(int arr[], int low, int high, int x) {
4      int left = low;
5      int right = high;
6
7      while (left < right) {
8          int sum = arr[left] + arr[right];
9          if (sum == x) {
10             printf("%d\n", arr[left]);
11             printf("%d\n", arr[right]);
12             return 1;
13         } else if (sum < x) {
14             left++;
15         } else {
16             right--;
17         }
18     }
19     return 0;
20 }
21
22 int main() {
23     int n, x;
24     scanf("%d", &n);
25
26     int arr[n];
27     for (int i = 0; i < n; i++) {
28         scanf("%d", &arr[i]);
29     }
30
31     scanf("%d", &x);
32
33     if (!findPair(arr, 0, n - 1, x)) {
34         printf("No\n");
35     }
36
37     return 0;

```

	Input	Expected	Got	
✓	4	4	4	✓
	2	10	10	
	4			
	8			
	10			
	14			

	Input	Expected	Got
